

eNcounterNow 2.2B Release Notes: New Document and Patient Workflow Tools

We are excited to announce a major platform update focused on digitizing documentation and consolidating patient history. This release delivers powerful new tools for administrators and improves how providers access patient information.

1. Enhanced eDocument Management

This suite of features provides administrators and providers with complete control over digital documentation, consent, and storage.

- **Custom Document Builder:** Administrators can now use the new eDocument builder to create and customize document templates and packets tailored to your institution's specific needs.

- **Mandatory Document Assignment:** Easily assign specific document templates and mark them as required for patient completion.

- **Digital Signature Support:** Patients and providers can submit **digital signatures** directly within the platform for documentation and acknowledgment.
- **Provider Access & Export:** Providers can now instantly view all signed or assigned patient documents within the Session Details section and easily **export** completed documents when necessary.

2. Consolidated Patient List View

Providers comprehensive view of a patient's historical information is updated.

- **Complete Session History Enhanced:** The Patient List has been enhanced to include direct access to all historical patient documents. Providers can now review a patient's past session information, including:
 - Past sessions History
 - **Documents (New)**
 - Visit notes
 - Discharge instructions

- Other uploaded attachments
- All information is accessible from one central location, providing a complete patient timeline.

3. General Improvements

Implemented various **bug fixes** and general **performance improvements** to ensure a smoother, more reliable user experience across the platform. Specific fixes include:

- **Resolved Character Encoding Issue:** Fixed a bug where odd special characters were appearing in Excel report extracts when generated for data in Spanish and Portuguese. Data exported to reports is now correctly encoded.
- **Updated Account Deactivation Permissions:** Corrected a bug where certain users were incorrectly restricted from using the deactivating accounts permission, ensuring proper administrative control.
