What's New for eNcounter

- Vital Manager Connectivity Optimization: Refined the device-switching logic for Total Vitals to ensure a seamless transition between USB and Bluetooth modes. Users can now reliably switch connection types via Settings and refresh the application to activate the selected device.

What's New for eNcounter Server

- DICOM Manager Performance Update: Enhanced the speed and reliability of image worklist searches. This update optimizes the connection between local imaging services and eNcounterCloud, ensuring a more responsive experience and consistent system performance during data retrieval.
