

A close-up photograph of a portable exam station. The device is housed in a grey, ruggedized case. In the background, a laptop screen is visible, displaying a software interface with a grid of blue dots and a large orange area. The foreground shows the grey plastic housing of the station. On the left, there is a large, dark, textured handle. To the right, there is a control panel with a circular button labeled "AUTO" and some smaller, less legible text. A black strap is attached to the bottom right of the device.

Portable Exam Station

This fully integrated portable exam delivery system comes with a military-grade ruggedized tablet PC and secure medical device storage. Built into a robust case, it offers the maximum level of protection for your equipment. This station enables users to stay connected during remote telemedicine sessions via Wi-Fi, 4G, SATCOM, or wired connections, ensuring valuable data isn't lost, meeting patients with the care they need in austere or remote environments, at every point of care.
